

IESA RESTRUCTURES TO MAKE WAY FOR NEW SOIL LAB

Integrated Environmental Services Australia (IESA) is currently undergoing an internal re-structure which will have some impact on our ability to provide Soil testing services for the next couple of months.

We are adding a whole range of services to our Soil Lab during the wet season, and will be back in full swing early in the new year.

The new look Soil Lab will be providing a range of services including:

- Residential soil testing
- Extended soil chemistry analyses
- Acid soil analysis
- Biodiversity and remediation advice
- Herbicide and pesticide residue testing

IESA apologises for any inconvenience caused to existing clients and thanks them in advance for their patience while we undertake these crucial changes to our future services. More information will be announced in the New Year.
